DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a method of making a semiconductor device, classified in class 438, subclass 522.
- II. Claims 16-24, drawn to a semiconductor device, classified in class 257, subclass 47.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product made can be made by a materially different process. For example, the substrate can be doped by diffusion. Note: a device claim is limited to the specific structure of the device not the method of making the structure. Claims 16 and 21 contain terminology associated with method claims and are given no weight in determining the patentability of the device structure. This restriction requirement ignores any method terminology found in the device claims.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 2823

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
